Ponorogo Regency, East Java

SUMMARY

I am a graduate of Geomatics Engineering from the Sepuluh Nopember Institute of Technology with experience in data analysis, dashboard development, machine learning, and data-based systems. Experience processing, cleaning, analyzing, and visualizing data using Python, SQL, Excel, and Power BI to generate insights that support business decision-making. He has experience as a Data Analyst and Data Scientist in the development of HR Business Dashboard, predictive analytics, and geospatial data-based distribution systems, with the ability to translate complex data into actionable insights.

EDUCATION

Institut Teknologi Sepuluh Nopember (ITS) — Surabaya, Indonesia

Bachelor of Geomatics Engineering | August 2020 – February 2025

GPA: 3.06/4.00

TECHNICAL SKILLS

- **Programming & Database:** Python, R, SQL, MATLAB, Java, Node.js, PostgreSQL (PostGIS).
- **Visualization & Business Intelligence:** Microsoft Excel, Tableau, Microsoft Power BI.
- **Geospatial & Engineering Software:** ArcGIS, QGIS, AutoCAD, PostgreSQL (PostGIS), Agisoft Metashape, Surpac.
- **Web Development Fundamentals:** JavaScript, HTML, CSS.
- **Productivity & Office Tools:** Microsoft Office Suite (Word, PowerPoint, Excel).
- **Machine Learning & Analytics:** Exploratory Data Analysis (EDA), Data Cleaning, Data Preprocessing, Data Visualization, Predictive Analytics, Machine Learning.

LICENSES & CERTIFICATIONS

- AI-900: Microsoft Certified Azure AI Fundamentals, Microsoft.
- Data Scientist, Dicoding.
- Data Scientist, Pusdatin of the Ministry of Education and Education.

PROJECT

HUGIN — Data Lakehouse Volve Oil and Gas Field (North Sea), Personal Project — Data Engineer | Portfolio Project | Aug 2026 - Present

- Built an end-to-end data pipeline for the Volve field open dataset (Equinor, North Sea) using Apache Airflow, dbt, Apache Iceberg, and Trino with a bronze–silver–gold medallion architecture.
- Designed Kimball's dimensional model with Slowly Changing Dimension Type 2 over X million lines from 6 different source formats: production CSV, WITSML XML, LAS well log, well direction survey, fixed-width ASCII, and reservoir simulation reports.
- Build an identity resolution crosswalk that unifies X well naming variants from 3 source systems into a canonical identifier, complete with scope reporting and explicit handling for unmapped data.
- Implement X data quality tests (dbt tests and Soda Core) that run automatically in GitHub Actions on each pull request, including grain validation, referential integrity, and domain business rules.
- Establish cross-grain reconciliation control between daily and monthly production data with automatic tagging for differences beyond tolerances.
- Design the pipeline to be idempotent and can be backfilled.
- Project access: <https://github.com/adetyatino/hugin>

BNPL Portfolio Quality & Early Warning, Project Mandiri — Data Analyst | Portfolio Project | Aug 2026 - Present

- Identifying the decline in headline NPLs from 2.59% to 2.41% (May–June 2026) stems from the descriptive effect of debit balance growth through the decomposition rate/mix/denominator effect reconciled with the vintage curve.
- Built a Python → DuckDB analytics pipeline → dbt containing 18 layered models (staging–intermediate–marts) with 152 automated data quality tests, processed a panel of 905 thousand account-month lines and 527 thousand transactions into 8 BI-ready data marts.
- Compiled vintage analysis, roll rate between DPD buckets, segment risk, and geographic early warning in 160 districts/cities to capture the deterioration in credit quality that was not seen in the aggregate ratio.
- Measuring the impact of three cut-off approval tightening scenarios with the Expected Loss = PD × EAD × LGD approach, presents an explicit trade-off between avoidable losses and sacrificed debit balances.
- Designing Power BI Portfolio Health, Vintage, Roll Rate & Early Warning, Segment Risk, Geographic Risk dashboards).
- Calibrating synthetic data against OJK's June 2026 public release — 7 out of 7 metrics (NPL ratio, yoy debit balance growth, average debit balance per account) are within the tolerance ±10%; The synthetic nature of the data is documented openly in the README.
- <https://github.com/adetyatino/bnpl>

Modeling of Literacy and Numeracy Achievement in Elementary Schools in Java, Pusdatin of the Ministry of Education — Data Scientist | Final Project Training | May 2026 — Aug 2026

- Integrate and clean cross-source data (Education Report Cards, Dapodik, BOSP, DJPK, and BPS IPM) for ±65,000 elementary schools in 119 districts/cities of Java Island with NPSN and area code crosswalk tables as the key to consolidation.
- Build a data quality audit module to map the completeness of variables per region, so that the limitations of the analysis results can be traced.
- Develop a two- to three-level Hierarchical Linear Model to separate the influence of school characteristics and regional characteristics; ICC shows 24.9% of literacy variations and 18.7% of numeracy variations come from differences between regions.
- Conducting global and local spatial autocorrelation analysis (Moran's I and LISA, 999 permutations) to identify clusters of low-achievement areas, including in western West Java and Madura.
- Developed an 8-page interactive dashboard using Python (Streamlit, GeoPandas, Folium, Plotly), including executive summaries, modeling, thematic mapping, and data downloads and reports.
- Develop policy recommendations based on the findings of school accreditation models, regional HDI, and completeness of basic data as the biggest influencing factors to support the determination of intervention priorities.
- Project Access: <https://finalprojectpusdatin.streamlit.app/>

WORK EXPERIENCE

Geological Agency — Land Surveyor and Geodynamic Data Analyst | Contract | May 2024 — Dec 2024

- Conduct GNSS surveys and field team coordination for high-precision geospatial data collection.
- Processing and analyzing GNSS data using Linux-based GAMIT/GLOBK.
- Visualize and validate the quality of GNSS data through Signal-to-Noise Ratio (SNR) and Skyplot analysis.
- Interpret the results of geospatial analysis to support the identification of data-based soil deformation patterns.

Sepuluh Nopember Institute of Technology — Research Assistant | Apprenticeship | Nov 2023 – Dec 2024

- Processing survey data from the Geospatial Information Agency using GAMIT software on Linux.
- Making a Probabilistic Seismic Hazard Analysis of Earthquakes in Lampung Province.
- Create maps using Software Generic Mapping Tools by creating a map data plotting program from the results of spatial processing and analysis.

ATR/BPN Surabaya 1 — Cadastral Surveyor | Internship | Aug 2023 – Sep 2023

- Conducting a cadastral survey in the separation of land certificates.
- Make a plot from the results of a field survey.
- Create a data archive in each location of land parcels that have been certified.
- Separate land certificates and explain how agrarian law in the measurement of land plots.

LEADERSHIP ACTIVITIES

Geodesy and Geodynamics Laboratory, Surabaya City — Laboratory Assistant | Nov 2023 — Dec 2024

- Participate in academic projects.
- Research activities.
- Teamwork-based tasks.

ITS Geomatics Student Association, Surabaya City — Geocentric Event Staff | Oct 2021 — Aug 2024

- The person in charge of the ITS Geomatics Engineering graduation ceremony 2022.
- Create event documentation.
- Design sponsorship proposal design.
- Voice the regulations of regeneration and assembly.

Community service, Ponorogo Regency — Public Relations | Jun — Aug 2022

- Installing solar power plants with an on-grid system.
- Connect the service team with the local community.
- Providing insight into solar power plants to the community.
